Superluminescent LED Box

DL-BX10-CSxxxxA

DenseLight Semiconductors reserves the right to make product design or specifications changes without notice.

A. PRODUCT DESCRIPTION

The DenseLight DL-BX10-CSxxxxA is a series superluminescent light emitting diode (SLED) broadband source for fiber optic gyroscope, fiber optic sensor, optical test instrument and optical coherence tomography. It provides a stable light source over a wide wavelength range include O, E, S, C and L bands. It incorporates a high precision controller for high output level and stability of the superluminescent diodes output. This DL-BX10-CSxxxxA consists of a built-in CW current driver, a temperature controller and a DenseLight standard 14-pin butterfly package CSxxxxA.

B. FEATURES

- Optical power of 3 to 50mW
- 3dB spectral width of 20 to 85nm
- Wavelength availability 1260 to 1670nm
- Fiber pigtail output with FC/APC connector
- Integrated optical isolator (optional)
- Single +5V power supply (optional power adapter)
- Built-in current driver and temperature controller
- Operating temperature 0 to 70 °C (<0°C or >70°C extended range available)
- Over temperature protection and internal PCB temperature monitor
- Highly stable power output with active power control
- High wall-plug efficiency
- Compact size
- RoHS Compliance
- Telcordia Qualified SLED (GR-468-CORE)

C. APPLICATIONS

- Fiber Optic Gyroscope
- Optical Test Instrument
- Fiber Optic Sensors
- Fiber Optic Communications
- Optical Coherence Tomography
- Biomedical Imaging Device
- Clinical Healing Equipment

D. PHYSICAL DIMENSIONS AND MECHANICAL SPECIFICATION

Dimension: L100 x W80 x H20 mm
 Enclosure: Metal Case
 Optical output: 1 m SMF-28 fiber, 900um loose tube with FC/APC
 Cooling: Air-cooled.
 Electronic interface: 10-way single row HE14 shrouded header

E. PIN ASSIGNMENT AND FUNCTION

HE14 Shrouded Header Pin Layout (Pin 1 near to SMF output)

Pin No.	Symbol	Power/Control /Monitor	Analog /Digital	Input /Output	Description
1	P _{GND}	P			Power Supply Ground
2	P _{GND}	P			Power Supply Ground
3	V _S	P			+5V d.c.
4	V _S	P			+5V d.c.
5	OVRT	M	D	O	To report PCB over temperature and internal self-protection shutdown in operation (Active high)
6	T _{MON}	M	A	O	To monitor the temperature of PCB
7	P _{MON}	M	A	O	To monitor the PD current in SLED
8	NC				
9	LO_EN	C	D	I	To enable Light output (active low or no connection to enable SLED light driver)
10	A _{GND}				Signal ground for control and monitor signals (internally shorted to P _{GND} via ferrite bead).

F. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Condition	Min	Max	Unit
Operating temperature (case)	T_{op}	I_{op}	0	70	°C
Operating Relative Humidity	RH	I_{op}		85	%
Storage temperature	T_{stg}	Unbiased	-40	85	°C
Input current	I_s			6	A

G. ELECTRICAL SPECIFICATIONS ¹

Parameter	Symbol	Condition	Min	Typ	Max	Unit
Input Power Supply	V_s		4.75	5	5.5	V
Line Regulation					0.08	%
Input Current ²	I_s				2	A
Total Power Consumption ²	P_s				10	W
Over Temperature	OVRT	Open-drain digital output with internal 1K pull-up to 3V for V_H and 8mA current sink for V_L				
	V_{OL}	Normal	0		0.45	V
	V_{OH}	Over-temp	2.0		3.0	V
Internal PCB Temperature Monitor	T_{MON}	Analog voltage: $T_{MON} = 395mV + (6.2mV/°C \times T)$, $T = \text{PCB temperature in } °C$				mV
Voltage	V_{OUT}	$R_X = \text{infinite}$	0		2.5	V
Output Impedance	R_{OUT}			150		Ω
Source Current	$ I_{OUT} $	$V_{OUT} = 2.5V$			4	mA
Power Output Monitor	P_{MON}	Analog output: $P_{MON} \sim 1.5V \times (P_o / P_{rated})$, P_o and P_{rated} in mW				V
Voltage	V_{OUT}	$R_X = \text{infinite}$	0		3.0	V
Output Impedance	R_{OUT}			150		Ω
Source Current	$ I_{OUT} $	$V_{OUT1} = 3.0V$			4	mA
Light Output Enable	LO-EN	Digital input with internal 10K pull-down for light output enable at logic low or no connection				
	V_{IL}	Normal	0		1	Normal
	V_{IH}	Disable light output	2.5		3.3	Disable light output

¹⁾ Unless otherwise specified. Tests are performed at $T_{op} = 25°C$

²⁾ Depending on product selection

Parameter	Symbol	Min	Typ	Max	Unit
Output stability ⁽³⁾ 1 hour	S _{tb}			± 0.03	dB
8 hour				± 0.1	dB

³⁾ After one hour of warm-up

The full optical performance of the DL-BX10-CSxxxxA can be found in DenseLight standard 14-pin Butterfly package CSxxxxA series individual specification. Please contact DenseLight Semiconductor Pte Ltd for further information.

I. APPLICATION INFORMATION

A. Typical Application Circuit

B. Power Supply Requirement and Connections

The power supply must be capable of supplying the maximum input current (I_s) as given in the electrical specification table at all times during operation. This is because during transients (eg. switching on the SLED or with a sudden change in operating ambient temperature), the SLED broadband Source will require a momentary higher current from the power supply compared to its steady-state operation.

The two cables to the two V_s pins (Pin 3 and Pin 4) should be shorted at the positive terminal of the power supply as shown in the Typical Application Circuit. This is to divide the total current load to the SLED Broadband source between the two cables. Similarly, the two cables to the P_{GND} pins (Pin 1 and Pin 2), as well as the cable to the A_{GND} pin (Pin 10) should be shorted at the ground of the power supply terminal.

C. Selection of Resistance R_x for Analog Monitor Signals

In the Typical Application Circuit given, the function of R_x is to increase the current in the signal cables so as to reduce the effect of environmental noise on the analog monitor signals. In a noisy environment, the value of R_x is recommended to be $1k\Omega$. By choosing R_x to be $1k\Omega$, the actual voltage measured at the buffer output will be reduced due to loading effect, as compared to when R_x is infinite.

$$V_{\text{BUFFER OUTPUT}} = \frac{R_x}{R_x + 150} \times V_{\text{OUT}}$$

where R_x is resistance in Ω

In a non-noisy environment, the value of R_x can be increased to reduce loading effect. It is not recommended to choose R_x less than $1k\Omega$.

For further technical information, please refer to DenseLight Semiconductor BX10 SLED Broadband Source User Operation Manual.
